THE PROCESS

- **Research** – Understanding student needs, challenges, and co-op housing experiences.
- **Design** – Transforming ideas into intuitive and user-friendly app features.
- **Develop** – Refining functionality to ensure performance, scalability, and reliability.

PROBLEM STATEMENT

Finding short-term housing and reliable roommates is difficult, especially for students going on co-op.

OUR SOLUTION

Sub4You is a centralized platform that allows students to easily post their rooms for sublease and find housing that fits their exact needs. With personalized filters and matching features, users can discover subleases that align with their preferences, making the process faster, safer, and more convenient.

APP STRUCTURE

- User inputs preferences and housing criteria
- System processes filters and matching logic
- Backend manages listings and user data
- Matching algorithm ranks relevant subleases
- Frontend displays results and user interactions

CHALLENGES WE OVERCAME

- Implementing secure user authentication and verification
- Ensuring data accuracy across dynamic listings
- Designing scalable real-time matching algorithms
- Maintaining privacy and user data protection
- Integrating seamless multi-feature user workflows

USER INTERFACE
